

Group No: 06
Date: 3/11/02
Report No: 08
Project Title: Wireless Cargo Container Tracking System

Group Leader: Andrew D. Nikow
Advisor: Yu Dong Yao
Sponsor/Client: Interpool

Project on Schedule: No (1 week behind)
Hours Spent Last Week: 50

Weekly Status:

Our week focused primarily on developing the software aspect of the program. We split the group up into two divisions. A Visual Basic team which would focus on using TCP/IP as a transport medium for relaying information between the two modules. Also a Visual C++ team which would use pre-built API's to access the direct hardware layers in order to achieve a communications medium between the two modules.

Significant time was spent coding these applications in order to develop a rough implementation by 3/22/02. From this build, we hope to further refine it into our finished design.
